I - IMPRESSIONS

1. All Chinese officials contacted in Formosa, both governmental and military, appeared to be thoroughly conversant with our mission, were desirous of our assistance and were most willing to cooperate in any manner that we might desire. That there are cross-currents of interests between the political officials there is no doubt; the same applies to the Chinese military leaders and in some instances there are deep differences between the two groups (these aspects are well described in references #1 and #2).

2. a. The Generalissimo appears to be in complete and active control of the Chinese Government and the Armed Forces. His appointments and directives, in many cases, are based on personal obligations and influences rather than on the capability or efficiency of the appointee. The Generalissimo many times expressed his willingness and desire to conform to any suggestions that we might have for an improved defense of Formosa and he emphasized that he desired direct contact between his government and CINCFE. This attitude provides all the necessary assurances that FEC action will be supported and that our efforts need not, and should not, become involved in any differences which may exist among the Chinese themselves. To do so would impede and perhaps destroy the FEC effort to aid. Based on our surveys, we should make known our views and then by diplomacy insist on execution.

b. Madame Chiang was an active and intelligent participant in both of our conferences. She is especially interested in welfare work and social development of both Chinese and Formosans on the islands.

3. There is a real potential in the armed forces on Formosa but it requires a definite and substantial boost in equipment, reorganization, communication and sound methods of direct command responsibility. Certain critical shortages in air, ground and naval equipment exist. (See references 8 and 9). A well-equipped and well-trained ground force of 75,000 to 100,000 men (exclusive of armored force of 27,000 men) would appear to be adequate to defend Formosa against that portion of Communist assault forces which might penetrate US Naval and Air defenses as now planned by Comdr 7th Fleet and CG FEAF.

4. Plans and operations now current in the Chinese Air, Naval and Ground Forces appear to be inadequate, incomplete and/or undeveloped in certain aspects. For example, employment of general reserves by motor movement is planned but motors are not available. Armor is to be used in certain areas but a long and vital bridge is not completed. Positions in beach defenses are selected but no underwater or other obstacles are installed and the materials are not available. Airfields are not operational and naval repair facilities are inadequate. All of these matters must be looked into by our surveys. Needs having been determined, we must see that requisitions are submitted and are filled. When filled, we must, by inspection, see that all required items reach the places for which intended. (This is a fundamental requirement and one that is now neglected by the Chinese.) Communications, both wire and radio, are inadequate. Roads are not developed and materials (iron, steel, wire and lumber) are lacking.

DECLASSIFIED
Authority NND 814528
EO 12065 Sec. 3-402

Secret

5. Materials and equipment are available in Japan and in the US. Weapons and related equipment should be procured by requisition from the US. Materials for construction can be procured from Japan which at present owes Formosa some $10,000,000. FEC surveys must initiate and direct steps to procure the needed items.

6. Aid in defense of Formosa is a FEC responsibility and will be a matter of direct communication between GHQ and the Chinese Government. In the case of air and naval operational matters direct contact between FEAF and COMNAVFE with the opposite Chinese arms is authorized. The FEC Liaison Group (see Para 3 of II - Decisions, below) will be the clearing group for all GHQ actions with the Chinese in Formosa. GHQ policy matters involving the Chinese Government will go through Lt Gen Ho, Chinese Ambassador in Tokyo.

II - DECISIONS

7. As set forth in inclosure #3, decisions were made by CINCFE in Formosa and will be used as a guide in all proposed Staff actions.

8. A FEC radio communication center will be established in Taipei at once using the Signal Detachment sent there on 31 July as a nucleus. It will handle all FEC traffic (including Navy and Air) between Tokyo and Taipei.

9. The FEC Liaison Group will be established in Taipei with a minimum of delay (G-3 will recommend action) and will comprise initially representatives of G-2, G-3, JSPOG, G-4, Engineer, Transportation, Signal, Navy and Air, not to exceed a total of 15 officers and 25 EM.

10. FEC action with Chinese officials will be direct and not through State or Attache individuals in Formosa. Our actions are not to be matters on which other US officials are authorized to report. All information (except G-2) reported to DA will be through GHQ channels.

III - ACTIONS

11. All GHQ addressees will initiate appropriate Staff action for approval of C/S as soon as practicable. The decisions of CINCFE as set forth in Section II above govern.

EDWARD M. ALMOND,
MAJ GEN GSC
Chief of Staff

FEC-SINO CONFERENCE 0900 1 AUGUST 1950

Present:

For China: Generalissimo Chiang Kai-Shek
Madame Chiang
Gen Chou, Chi-Jou, Chief of Joint Staff and CinC Air Forces
Lt Gen Sun, Li-Jen, CinC Ground Defense
Vice Adm Kwei, Yun-Chin, CinC Naval Forces
Lt Gen Ho, Shih-Li, Chief, Military Mission to Japan
Interpreter

For FEC: Gen MacArthur, CINCFE
Adm Joy, COMNAVFE
Adm Strubel, Comdr 7th Fleet
Gen Stratemeyer, CG FEAF
Gen Almond, Chief of Staff, GHQ, FEC
Gen Willoughby, ACofS G-2, GHQ, FEC
Gen Wright, ACofS G-3, GHQ, FEC

I. The Conference, arranged at CINCFE's request, was opened by General MacArthur, who stated:

1. The Liaison Group comes from Tokyo to close the gaps in supply and to assist in other ways. This Group is purely professional and has nothing to do with political matters. It is concerned with defense only and is responsible only to GHQ and President Chiang Kai-Shek's Headquarters in Formosa.

2. We will establish in Formosa a US military Communication Center to perfect communication between General Chiang's Headquarters and GHQ in Tokyo - it will also be able to improve Taiwan communications. This Center is responsible to GHQ FEC alone.

3. In order to obtain immediate coordination in defense, Admiral Struble working with Admiral Kwei and General Stratemeyer with General Chou will work out coordination of naval and air matters with the Chinese Air Force and Naval Forces. They will agree on what U.S. planes are to be sent here. Admiral Struble and General Stratemeyer have full authority to make any decisions in these matters.

4. Liaison in policy matters originating in Tokyo will be through General Ho. The Command structure will remain nationally integral - the Chinese forces under their own commanders; U.S. forces will be similarly controlled.

5. Every possible effort will be made by both headquarters to obtain the necessary supplies from the U.S. to adequately arm the Chinese Nationalist Forces. These were the points of agreement arrived at yesterday between General Chiang and myself. If there are any others, let us have them now.

a. We will send here a constant stream of people to discuss various items. American ships will show in Formosan waters. American goodwill is indicated by these means, showing the complete accord between the two nations in coordinated plans, actions and methods allied against a common enemy and for a common purpose.

II. General Chiang replied through his interpreter, who stated:

These points just made by General MacArthur have his full approval. He is particularly satisfied with the sending of liaison groups from Tokyo. With regard to coordination, details will be worked out when they arrive. He appreciates greatly General MacArthur's assistance.

III. Discussion:

Interpreter (For General Chou): In Kin Men monale is good and at present the defenses there are strong. However, the Communists, by their preparations, might take Kin Men. The Communists are building airfields on Amoy and Foochow and troops are being concentrated without interference. Should we stick out there, or withdraw?

General MacArthur: Until I know more, I can't advise you on that. My instinct is to fight anywhere! I imagine Gen Chou has made his decision, and if he intended to withdraw he would already have done so, but I imagine the real question in his mind was - "Is the U.S. prepared to assist in the effort to attack the Communists or will the U.S. prevent the Nationalists the right to defend these islands?" If the latter, there is no need for further discussion; if the former we can discuss it.

Interpreter (For General Chou): General MacArthur has read his mind. He wants to know whether the U.S. will hinder the mainland effort. If not, Kin Men will be held as a springboard for an invasion. If we hold Kin Men negatively, it is a liability. If we can bomb the mainland there is some purpose in holding the island.

General MacArthur: What he has said is sound and true. This is being discussed in Washington now. In Tokyo there is no disagreement with his views. Soon we may expect an extension of President Truman's recent statement. I sincerely hope this extension is in accord with General Chou's own view.

Interpreter: Do you mean the point of General Chou's question will be clarified?

General MacArthur: That's my belief.

General Almond: Our group has already found a dire need for many items necessary for Taiwan defense. These should be arranged for at once and such materials as are procurable in Japan should be purchased there by the Chinese Government.

General MacArthur: Ask General Ho to arrange for this with General Marquat at once.

Interpreter (For Gen Chiang): He agrees especially and will work out at once.

General MacArthur: We can work out these details and will send an Engineer Officer here to determine them.

Interpreter (For Gen Chiang): He welcomes this. When will this group arrive?

General MacArthur: As soon as possible.

Admiral Joy: Is the repair on ships included?

General MacArthur: Yes.

Interpreter (For Gen Chiang): Ship repairs are among top items. In the Chinese defense forces we have many shortcomings. He requests all to feel free to give advice on any point and anything said will be accepted in the best spirit.

Madame Chiang: As in the Second World War, we will take the task of caring for the personnel who come to Taiwan to rest and recreate. We will be glad to welcome them.

General MacArthur: Our thanks.

Secret

Authority NND 816528
EO 12065 Sec. 3-402

Interpreter (For Gen Chiang): If no other business, he suggests we drive around the city until time for the plane to depart in about one hour.

General MacArthur: We shall be happy to do so.

(The Conference adjourned at 0955 and all present parted with good-byes and a most cordial attitude.)

TAIWAN DEFENSE MEASURES

1. Guiding Principles of Campaign

During the initial stage in the defense of Taiwan, air force will chiefly be used, with the navy as an auxilliary. The purpose is to neutralize enemy attack preparations. During the second stage, the navy will chiefly be used, with the air force as an auxilliary. The purpose is to destroy the enemy on sea. During the third stage, the ground forces will chiefly be used, with the navy as an auxilliary. The purpose is to annihilate the enemy on or near the coast.

In the defense of Taiwan, offensive means will be employed, together with the application of initiative. The idea is to annihilate the enemy, in a state of exhaustion and confusion inherent in landing operations, before he has any chance of establishing a secure footing. It is our purpose to prevent the enemy from landing by fortifying and defending our strong points all along the shore by means of fortification and the fire power of the ground forces, together with the help of the navy and air forces. Failing that, it is our purpose to limit and block the movement of the enemy by the employment of the defending forces and to launch a timely and decisive counterattack of sufficient strength so as to annihilate the enemy immediately after landing.

The corps and divisions in the General Reserve are now being held in an all-time readiness in the different areas so as to be able to render swift assistance to any effected locality or deal the enemy an annihilating blow, in a counterattack.

Besides the General Reserve of the General Defense Command, each defense command has a reserve of its own, including tank units in every case. Those reserves, especially the tank units, though stationed in the different commands, will be employed by the General Defense Command whenever circumstances so require, so as to achieve numerical superiority in a counterattack.

The above-mentioned counterattacking troops will be transported chiefly by means of the railroad and motor vehicles, with air and sea transportation as an auxilliary. It is estimated that it takes four hours for the reserves of the first line corps and divisions to reach the coast and that it takes twelve hours for the reserves of the different defense commands to reach the effected localities in the different areas respectively. And within twenty-four hours, 80% of the General Reserve can be concentrated in a given locality.

Arrangements are made for the troops stationed in the Pescadores to land on this island, if circumstances so demand.

And in order to prevent infiltration and the activity of paratroops, self-sufficient bases of defense are established in important places in the rear, especially near the air and naval bases.

2. Troop Dispositions

The ground forces of the Taiwan defense forces consist of nine corps, three independent divisions, five tank groups and two harbor defense commands (Kaohsiung and Keelung). The whole island is divided into four Defense Commands. Eight corps are responsible for positional defense all along the coast of the island, with due emphasis on the defense of the northern part of the island. The General Reserve consists of one corps, three independent divisions and the major part of the tank units, stationed in different areas, so as to be able to participate in

Secret

DECLASSIFIED
Authority NND 814528
EO 12065 Sec. 3-402

any decisive engagement in the desired sector. (See sketch) The Pescadores forms an independent entity, with a corps and the Makung Harbor Defense Command as the backbone of defense. Machu Island is an another independent entity, with the strength of a division. (The defense of Quemoy is the direct responsibility of the MND).

3. Preparations

(1) Fortifications

With the afore-mentioned principles in mind, fortification has been divided into three stages. The first stage ended in February with the completion of 1,700 reinforced concrete forts all along the coast. Their force will be used mainly in sealing up the coastline. The second stage ended in May with the completion of permanent and semi-permanent fortifications. Many Japanese fortifications of the same nature were repaired during the same period. The purpose of these fortifications is to form defensive points suitable for units of company and battalion strength. The third stage ended with the month of July. It is devoted to the strengthening of the fortifications and forts already in existence. The purpose is twofold: to form the points of resistance into bases for defense in depth, and to increase the effect of enfilading fire in other places.

(2) Transportation

The road system in Taiwan is adequate for civilian use, but as a rule, the bridges are not strong enough, nor are the roads wide enough for the movements of tanks. After much repairing and hard work, the roads along the coast have been mostly strengthened to such an extent as to be able to take care of 16-ton tanks. Owing to the presence of numerous streams and rivulets, bridges on all the roads are, during the rainy seasons, very often damaged by floods. To keep up the supply of repair materials for the bridges is one of our great problems. We are at present proceeding with the repair of our railroad tracks, the replacement of sleepers and the reconstruction of platforms, stations and rolling stocks. We have just completed the registration of civilian vehicles and organized them into regional units as a preparatory measure for mobilization.

(3) Communications

Taiwan originally possesses the convenience of a workable communication system. After months of work, we have now made it possible to communicate with strong points of platoon strength. Because of the lack of suitable material, covered wire are being widely used in place of bare wires. This defect should be remedied. Units from divisions up enjoy efficient wireless communication. We are now in urgent need of air-ground, ground-navy, and infantry-tank liaison devices.

(4) Food, fuel, and ammunition

It is our program to store up a month's supply of rice. We are able to store up so far ten days' supply only. We intend to store up small calibre ammunition to the amount of six basic units and large calibre ammunition to the amount of twelve basic units. So far we have had only 50% success. As to liquid fuel, we have been able to store up the scheduled amount, i.e., fifteen basic units.

(5) Replacement

In the 18-45 age groups in Taiwan, there are about 1,200,000 people eligible for immediate military service. As a matter of fact, 4,000 among these have been selected and trained as non-commissioned officers by the General Defense Command. So there is no difficulty in replacement in Taiwan in the near future.

DECLASSIFIED
Authority NND 816528
EO 12065 Sec. 3-402

Secret

(6) Training

In order to instill new will to fight and to teach the new technique in war, the General Defense Command in Fengshan has trained 905 field officers, 7,640 company officers, and 8,000 non-commissioned officers, plus 1,110 officers and men in artillery, 1,310 officers and men in the engineers, and 2,797 officers and men in the signals. The General Defense Command also exercises supervisory powers over troop training through the training supervision teams. The military exploits of the trainees testify very eloquently in regard to the value of Fengshan training in the successes achieved in the Mavei and Quemoy battles.

4. Our Immediate Needs

What we most urgently need at present is ammunition. We have now on the average only three basic units for small calibre weapons, and six basic units for large calibre weapons. We are even more deficient in ammunition for tanks. We need also light machine guns, bazookas, 105mm howitzers, barbed wire and especially heavy trucks, and trucks for the artillery. A detailed list of our most urgent needs is hereto attached.
